

After visiting the TKKR Lab and their famous Arcade Gaming Box, i often thaught about building a smaller one.

So here are some ideas for the hard- and software:

- Raspberry PI running an emulator like [Mame](#)
- a small TFT or Touchscreen
- disassmble this one [USB Joystick](#) an use the USB Controller alternatively [32 Button Interface](#)
- some buttons like [this one joystick](#)
- something like a [Coin Comparator](#) would be nice too
